

You are invited!

Attend a demonstration of advanced visualization systems at NVIDIA's GPU Technology Conference 2015!

IGI will showcase the latest 4K and advanced visualization technology available.

Attendees will see examples of technology designed, installed and serviced by IGI for use in Design and Manufacturing, Military Intel, Command & Control, and Scientific Visualization.

IGI can be found in Booth 429 near the NVIDIA booth.

Various demos will be running during session and exhibition hours.

For more information on GTC 2015 visit:

<http://www.gputechconf.com/>

Systems on display include:

IGI Powerwall 4K

Located in the Digital Manufacturing Pavilion where the networking center is located, see the IGI Powerwall 4K featuring the Barco Galaxy HFR (high frame rate) 4K-23 (23,000 lumens) 3-chip DLP projector. The system will be displaying ultra-high 4K (4096x2160) resolution imagery.

Complex designs with real-time, photo-realistic ray-traced rendering using multiple NVIDIA GPUs.

NVIDIA VCA

Announced at GTC 2014, NVIDIA selected IGI to be the system integrator for the design, manufacturing and engineering industries.

IGI will demonstrate the GPU processing power of the VCA in numerous configurations including standalone and via a 19 node cluster of VCA devices.

Contact us today

We would be happy to reserve a private demonstration so you can witness these leading-edge solutions from IGI and make your critical decisions in context!

These state-of-the-art solutions are the culmination of our vast industry experience in designing, engineering and delivering technology that enhances our customer's critical decision making.
